Project Title	A CRM Application for the Chai Shop
Project Type	Group Project
Platform	Salesforce
Project Domain	Customer Relationship Management (CRM)

1. Introduction

The project titled “A CRM Application for the Chai Shop” is a Salesforce-based CRM project. The application is developed by following the project instructions provided through the Skill Wallet Group Project. Each instruction was studied carefully and implemented step by step in a Salesforce Developer environment. The project covers configuration, data management, user interface, automation, validation, communication, reporting, and dashboard activities required for the Chai Shop CRM application.

2. Project Objective

- To develop a CRM application for managing the requirements of a Chai Shop.
- To configure the required Salesforce objects, fields, tabs, layouts, and record types.
- To implement validation and automation according to the given instructions.
- To organize application data and relationships in a structured manner.
- To create email templates, flows, reports, and dashboards.
- To demonstrate the completed Salesforce CRM application through a final demo.

3. Salesforce Developer Account Creation

The Salesforce Developer account was created and configured as the working environment for the project. The required Salesforce setup was accessed and the project activities were performed in the Developer environment.

Activities completed:

- Created/accessed the Salesforce Developer account.
- Opened the Salesforce Setup environment.
- Configured the required project working environment.
- Used the Salesforce Setup and application configuration areas for subsequent tasks.

4. Objects and Fields

The required Salesforce objects and fields were created or configured based on the project instructions. The object structure provides the foundation for storing and managing the Chai Shop CRM data.

- Created/configured the required custom objects.
- Created the required fields and data types.
- Configured field properties according to the instructions.
- Reviewed object and field settings after creation.

Evidence / Screenshot: Attach the relevant Object Manager and field configuration screenshots here.

5. Tabs and Activities

The required tabs were configured so that users can easily access the relevant CRM objects and activities.

- Configured the required object tabs.
- Checked tab visibility and availability.
- Organized the required navigation items.
- Verified that the required records can be accessed through the configured tabs.

Evidence / Screenshot: Attach tab configuration and related activity screenshots here.

6. Lightning App and Activities

The required Lightning App activities were completed to provide an appropriate Salesforce user interface for the Chai Shop CRM application.

- Configured the required Lightning application.
- Added the required navigation items.
- Checked application accessibility.
- Verified the application from the user interface.

7. Global Picklists and Activities

Global picklist activities were completed according to the project requirements. Picklist values were configured so that consistent choices can be used across the required fields.

- Created/configured the required global picklist.
- Added the required picklist values.
- Configured the required picklist usage.
- Verified the values in the related fields.

8. Files and Relationships

The required file-related and relationship activities were implemented to connect the relevant CRM data and maintain the required structure between records.

- Configured the required file-related settings.
- Created/configured required relationships between objects.
- Verified relationship fields and related records.
- Checked the relationship behavior in the application.

.

9. Page Layouts

Page layouts were configured according to the instructions so that the required fields, sections, and record information are displayed correctly to users.

- Configured the required page layouts.
- Added or arranged the required fields and sections.
- Checked field visibility and editability.
- Verified the final layout using sample records.

10. Record Types

The required record types were configured to support the different record processes specified in the project instructions.

- Created/configured the required record types.
- Configured the required record type settings.
- Associated the required page layouts.
- Verified record creation using the configured record types.

11. Validation Rules

Validation rules were implemented to ensure that users enter valid and complete information. The rules were created based on the conditions specified in the project instructions.

- Created the required validation rules.
- Configured the required validation conditions and formulas.
- Added suitable error messages.
- Tested valid and invalid record values.
- Verified that incorrect data is prevented according to the requirements.

12. Email Templates

Email templates were configured to support the required communication process in the Chai Shop CRM application.

- Created/configured the required email templates.
- Added the required subject and message content.
- Configured the required email-related settings.
- Verified the template content.

13. Flows and Automation

Salesforce Flow activities were completed to automate the required business processes. The flows were configured according to the project instructions and tested after implementation.

- Created/configured the required flows.
- Added the required flow elements and logic.
- Configured the required conditions and actions.
- Activated the required flows.
- Tested the automation using appropriate record

14. Reports and Dashboards

Reports and dashboards were created to provide a clear view of the CRM data and project information. The required report and dashboard activities were completed according to the instructions.

- Created/configured the required reports.
- Selected the required report type and fields.
- Applied the required filters and grouping.
- Created/configured the required dashboard.
- Added the required dashboard components.
- Verified the displayed data and final output.

15. Testing and Verification

After completing the configuration activities, the application was checked to verify that the required features work according to the project instructions.

- Checked object and field configuration.
- Tested record creation and editing.
- Verified validation rules.
- Checked page layouts and record types.
- Tested required flows and automation.
- Verified reports and dashboard output.

16. Demo Video

A demo video was prepared to demonstrate the completed Chai Shop CRM application. The video shows the project environment, major configuration activities, and the final working output.

17. Conclusion

The “A CRM Application for the Chai Shop” project was completed by following the provided instructions step by step. The project includes Salesforce Developer environment setup, object and field configuration, tabs, Lightning App activities, global picklists, files and relationships, page layouts, record types, validation

rules, email templates, flows, reports, and dashboards. These activities together provide a structured CRM solution for the Chai Shop requirements. The completed application was tested and prepared for final demonstration and submission.
